ORIGIN AND BREEDING HISTORY OF THE VARIETY

'53V63'

53V63 is a ninety-nine clone synthetic variety. Parents were selected phenotypically for resistance to one or more of the following pests: bacterial wilt, Fusarium Wilt, Verticillium wilt, Phytophthora root rot, Aphanomyces root rot (races 1 and 2), spring blackstem, and potato leafhopper. In addition, parents were selected for forage yield, fall dormancy, and field appearance. Syn. 1 seed (breeder seed) was produced on all parent plants and bulked. Parent plants trace through several experimental lines primarily to 5347LH, with smaller contributions from 5246, 5252, 5333, 5373 and trace contributions from several other varieties and germplasm.

This variety was observed over three generations and found to be uniform and stable.

No variants were observed during seed (breeder, foundation and commercial) multiplication procedures.

It is confirmed that 53V63 meets presently acceptable levels for uniformity for alfalfa varieties.

EXHIBIT B

NOVELTY STATEMENT

'53V63'

53V63 most closely resembles the variety 5347LH. 53V63 differs from 5347LH primarily in its resistance to the potato leafhopper. 53V63 is resistant (47.9%), and 5347LH is moderately resistant (26.3%)*.

Other traits of difference include resistance to: Verticillium wilt (53V63 = 53.3%, 5347LH = 35.0%), Aphanomyces root rot (53V63 = 54.9%, 5347LH = 33.0%), Pea aphid (53V63 = 34.2, 5347LH = 60.7%).

These two varieties also differ in flower color as 53V63 has 63% purple, 33% variegated, and 4% yellow; while 5347LH has 35% purple and 64% variegated.

ADDRESS (Street and No., or R.F.D. No., City, State, and Zip Code) 7305 N.W. 62nd Ave., P.O. Box 287 Johnston, IA 50131		FOR OFFICIAL USE ONLY PVPO NUMBER 8900127

PLEASE READ ALL INSTRUCTIONS CAREFULLY: Place numbers in the boxes to designate the expressions which are characteristic of the commercial generations of the application variety. Data for quantitative plant characters should be based on a minimum of 100 plants. Include leading zeros when necessary (e.g. 0 8 9) for quantitative data. Comparative data should be determined from varieties entered in the same trial. Plant color may be precisely designated by using any recognized color chart, e.g., The Munsell Plant Tissue Color Charts.

- 1) 53V63 is a ninety-nine clone synthetic variety. Parents were selected phenotypically for resistance to one of more of the following pests: bacterial wilt, Fusarium Wilt, Verticillium wilt, Phytophthora root rot, Aphanomyces root rot (races 1 and 2), Spring Blackstem, and potato leafhopper. In addition, parents were selected for forage yield, fall dormancy, and field appearance. Syn. 1 seed (breeder seed) was produced on all parent plants and bulked. Parent plants trace through several experimental lines primarily to 5347LH, with smaller contributions from 5246, 5252, 5333, 5373 and trace contributions from several other varieties and germplasm. Germplasm sources are *M. falcata* (6.4%), Ladak (6.6%), *M. varia* (26.6%), Turkistan (2.2%), Flemish (37.8%), Chilean (4.8%), Peruvian (.1%), KS108GH5 (2.5%), KS94GH6 (2.5%), 81IND-2 (2.5%) and unknown (8.0%).
- 2) 53V63 is adapted to and intended for use in the north central, east central, and Great Plains regions of the United States. It has been tested in Iowa, Illinois, Minnesota, Wisconsin, and Ontario, Canada.
- 3) 53V63 is a very winterhardy, dormant cultivar with a fall dormancy similar to Ranger. Flower color in the syn. 2 generation is approximately 63% purple, 33% variegated and 4% yellow with traces of cream and white.
- 4) 53V63 has high resistance to anthracnose (race 1), bacterial wilt, Fusarium wilt, Phytophthora root rot, Verticillium wilt, Aphanomyces root rot (race 1); resistance to pea aphid, potato leafhopper, stem nematode; and moderate resistance to spotted alfalfa aphid. 53V63 has not been tested for resistance to root knot nematode and blue alfalfa aphid.
- 5) Breeder seed (syn. 1) was produced on vegetative cuttings of the 99 parent clones in the greenhouse in 1996 and in cage isolation in 1997. Seed from all parents was bulked. Seed classes will be breeder (syn. 1), foundation (syn. 2 or syn. 3), and certified (syn. 2, 3, or 4). Foundation seed may be produced from breeder or foundation seed. The second generation of foundation may be produced at the discretion of Pioneer Hi-Bred International, Inc. Limitations of age of stand will be three and five years respectively for foundation and certified seed. Pioneer Hi-Bred International, Inc. will maintain sufficient breeder seed and foundation seed for the projected life of the variety.

PLEASE NOTE:

Plant variety protection can be afforded only to owners (not licensees) who meet one of the following criteria:

1. If the rights to the variety are owned by the original breeder, that person must be a U.S. national, national of a UPOV member country, or national of a country which affords similar protection to nationals of the U.S. for the same genus and species.
2. If the rights to the variety are owned by the company which employed the original breeders(s), the company must be U.S. based, owned by nationals of a UPOV member country, or owned by nationals of a country which affords similar protection to nationals of the U.S. for the same genus and species.
3. If the applicant is an owner who is not the original breeder, both the original breeder and the applicant must meet one of the above criteria.

The original breeder may be the individual or company who directed final breeding. See Section 41(a)(2) of the Plant Variety Protection Act for definition.
